

Explore Learning tutors use the best available teaching materials to help children fulfil their potential in maths, reading, writing and spelling. Explore staff will select appropriate resources for your child in both maths and English and will ensure that they cover a combination of courses, enabling them to reach their potential in all areas. We will also review the programme of work with you on a regular basis as your child's skills and confidence develop.

Maths courses

Explore Maths

From learning times tables to conducting probability experiments, Explore Maths covers the National Curriculum and the Curriculum for Excellence in Scotland. Students work at an appropriate level and gain confidence and motivation throughout. Explore Maths consists primarily of the SuccessMaker™ Maths modules which are highly engaging and very comprehensive.

The main benefits:

1. Proven Numeracy Gains

Both independent and Explore studies show that students using the Successmaker™ programme make, on average, 12 months' academic gain in maths in just 6 months.

2. Children Enjoy Maths!

Explore staff are able to assign work to children that is at exactly the right level for them. This means that children tackle questions with renewed confidence and enthusiasm. Those excelling at school are challenged further and children who previously struggled are given the time and opportunity to fully understand and master skills.

3. Supports Effective Target-Setting

The clear and detailed reports enable staff to set appropriate targets for children and easily monitor their progress with parents. Children are praised and rewarded for their concentration and effort as well as their academic success.

Enrichment Maths

For the most gifted mathematicians, Explore Learning provides additional complex problem solving and practical maths classes designed to stretch and motivate. In our Enrichment Maths course, young people work both independently and as part of small groups to try challenging and stimulating mathematics. Incorporating resources produced by NRICH at the University of Cambridge, this course is designed to take our members beyond the school curriculum and develop their natural maths ability. If you think your child would benefit from this course, please speak to a member of staff to find out more about how Enrichment Maths works.

Secondary Maths

For young people in secondary school, Explore Learning provides maths tuition up to the full GCSE syllabus. Using SAM Learning, we help Explore members to practise, revise and improve higher-level maths and even sit past papers from examination boards. All of this works in tandem with the support provided by our dedicated tutors to ensure that young people go into their exams with the utmost confidence!
