

Help your child to understand the minute and hour hand with this handy half-term hack

## LET'S GET STARTED!

1. Cut out each of the clock faces, the minute and the hour hands
2. Cut along the dotted lines to create 12 flaps on the blue clock
3. Glue the centre of the black clock & stick blue clock directly on top (make sure both the dials are perfectly aligned)
4. Make sure the flaps on the top clock open
5. Use a metal split pin to attach clock hands at the center of clock. Make sure the hands move easily
6. Your learning clock is ready!
